I. INTRODUCTION

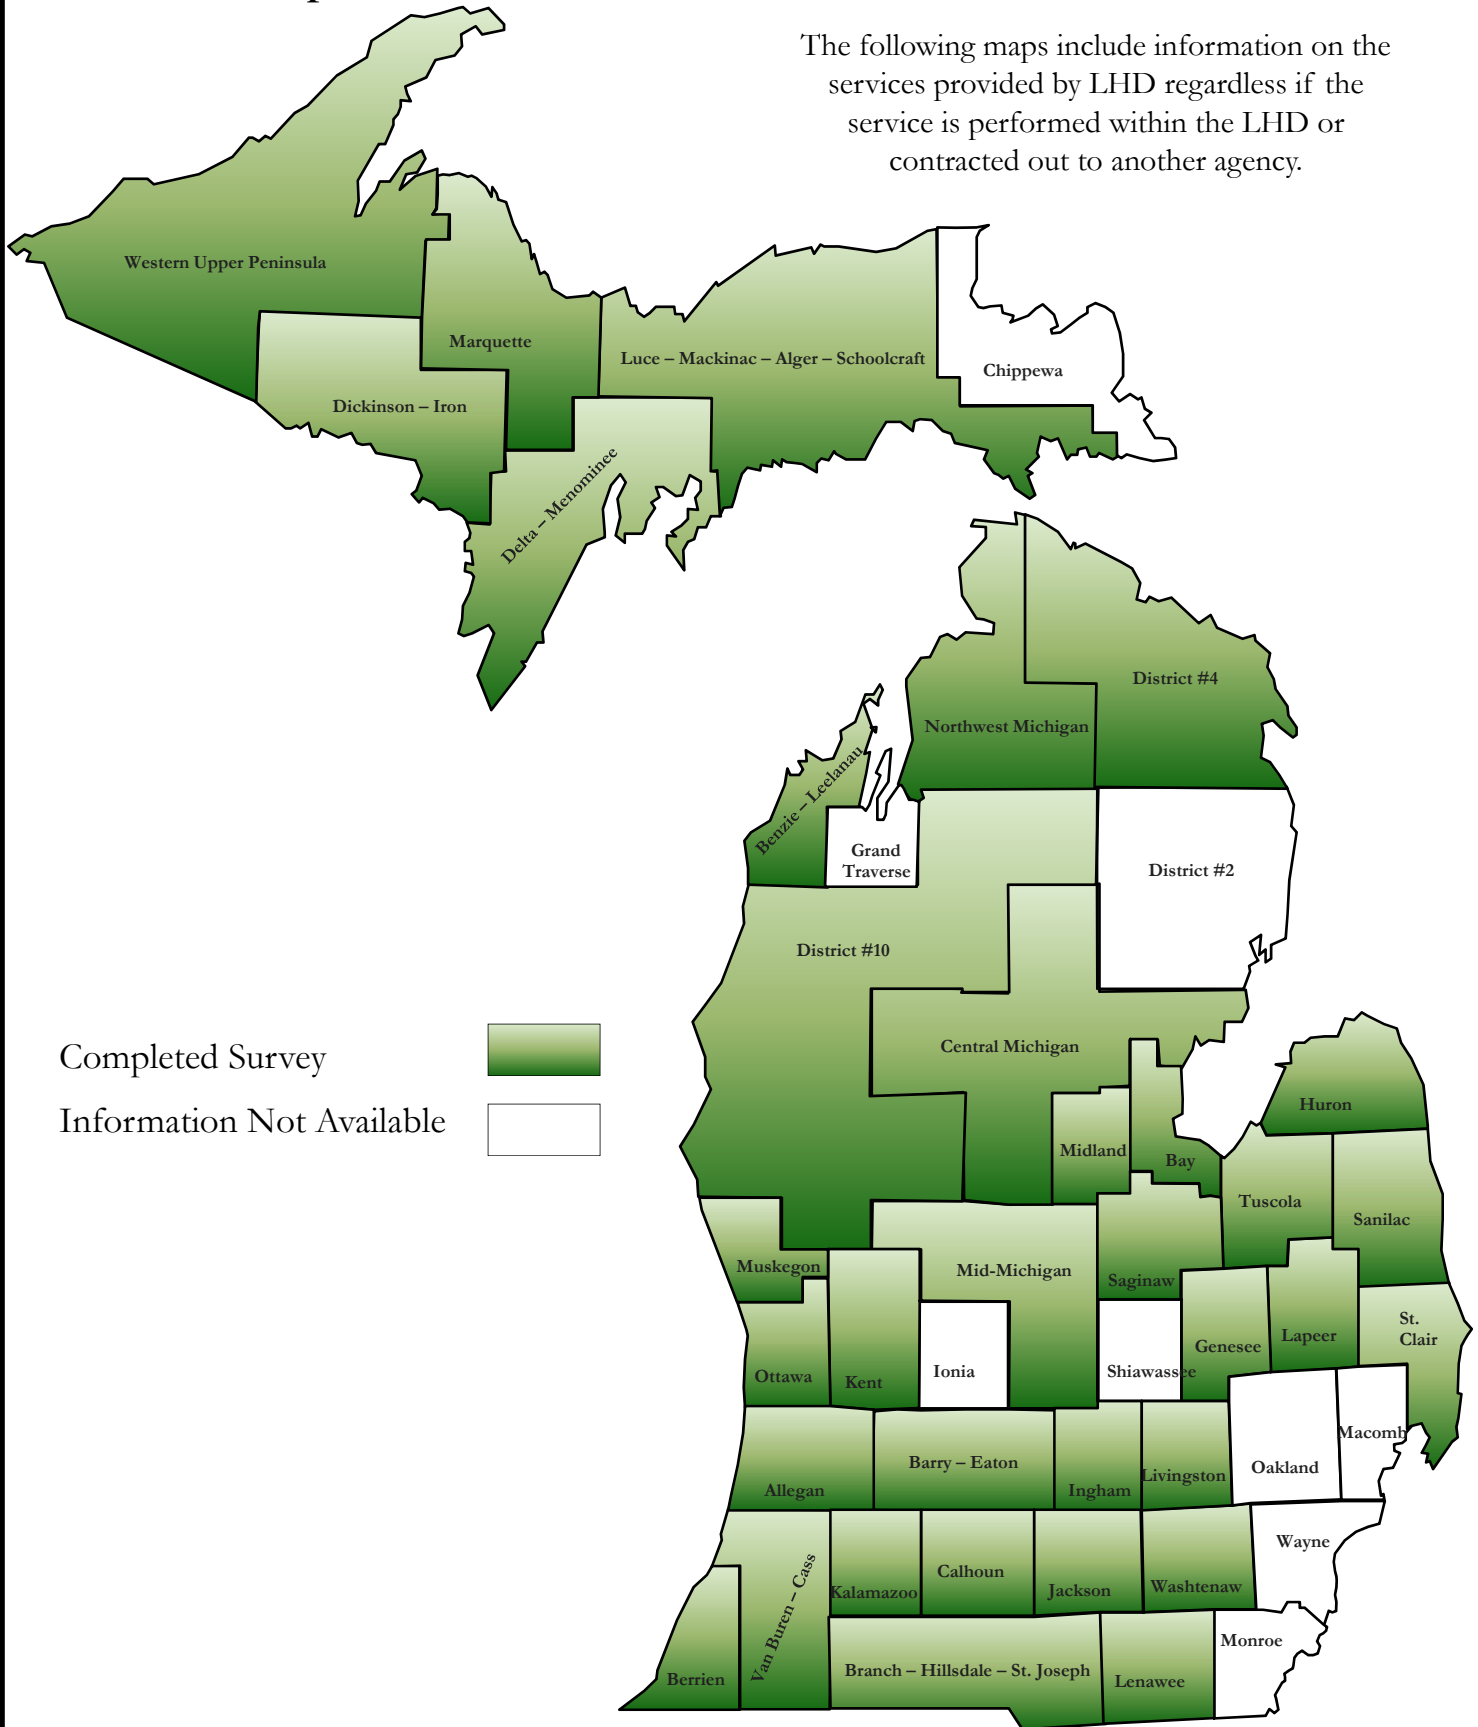

Local Health Departments (LHD) were asked to complete a 10/15 minute survey assessment on services provided in their jurisdiction. The survey was completed via *Survey Monkey* by Health Officers, Deputy Director(s), and/or Administrator(s). There was a response rate of 78% which includes 35 of the 45 Local Health Departments. The intended purpose of the survey was:

- For best practices information, e.g. oral health programming, immediate access on information for which health departments are currently running an oral health program.
- A tool for when Michigan Association for Local Public Health (MALPH) staff meets with specific legislators to demonstrate that the health departments serving their constituents receive these kinds of services from the local health department.

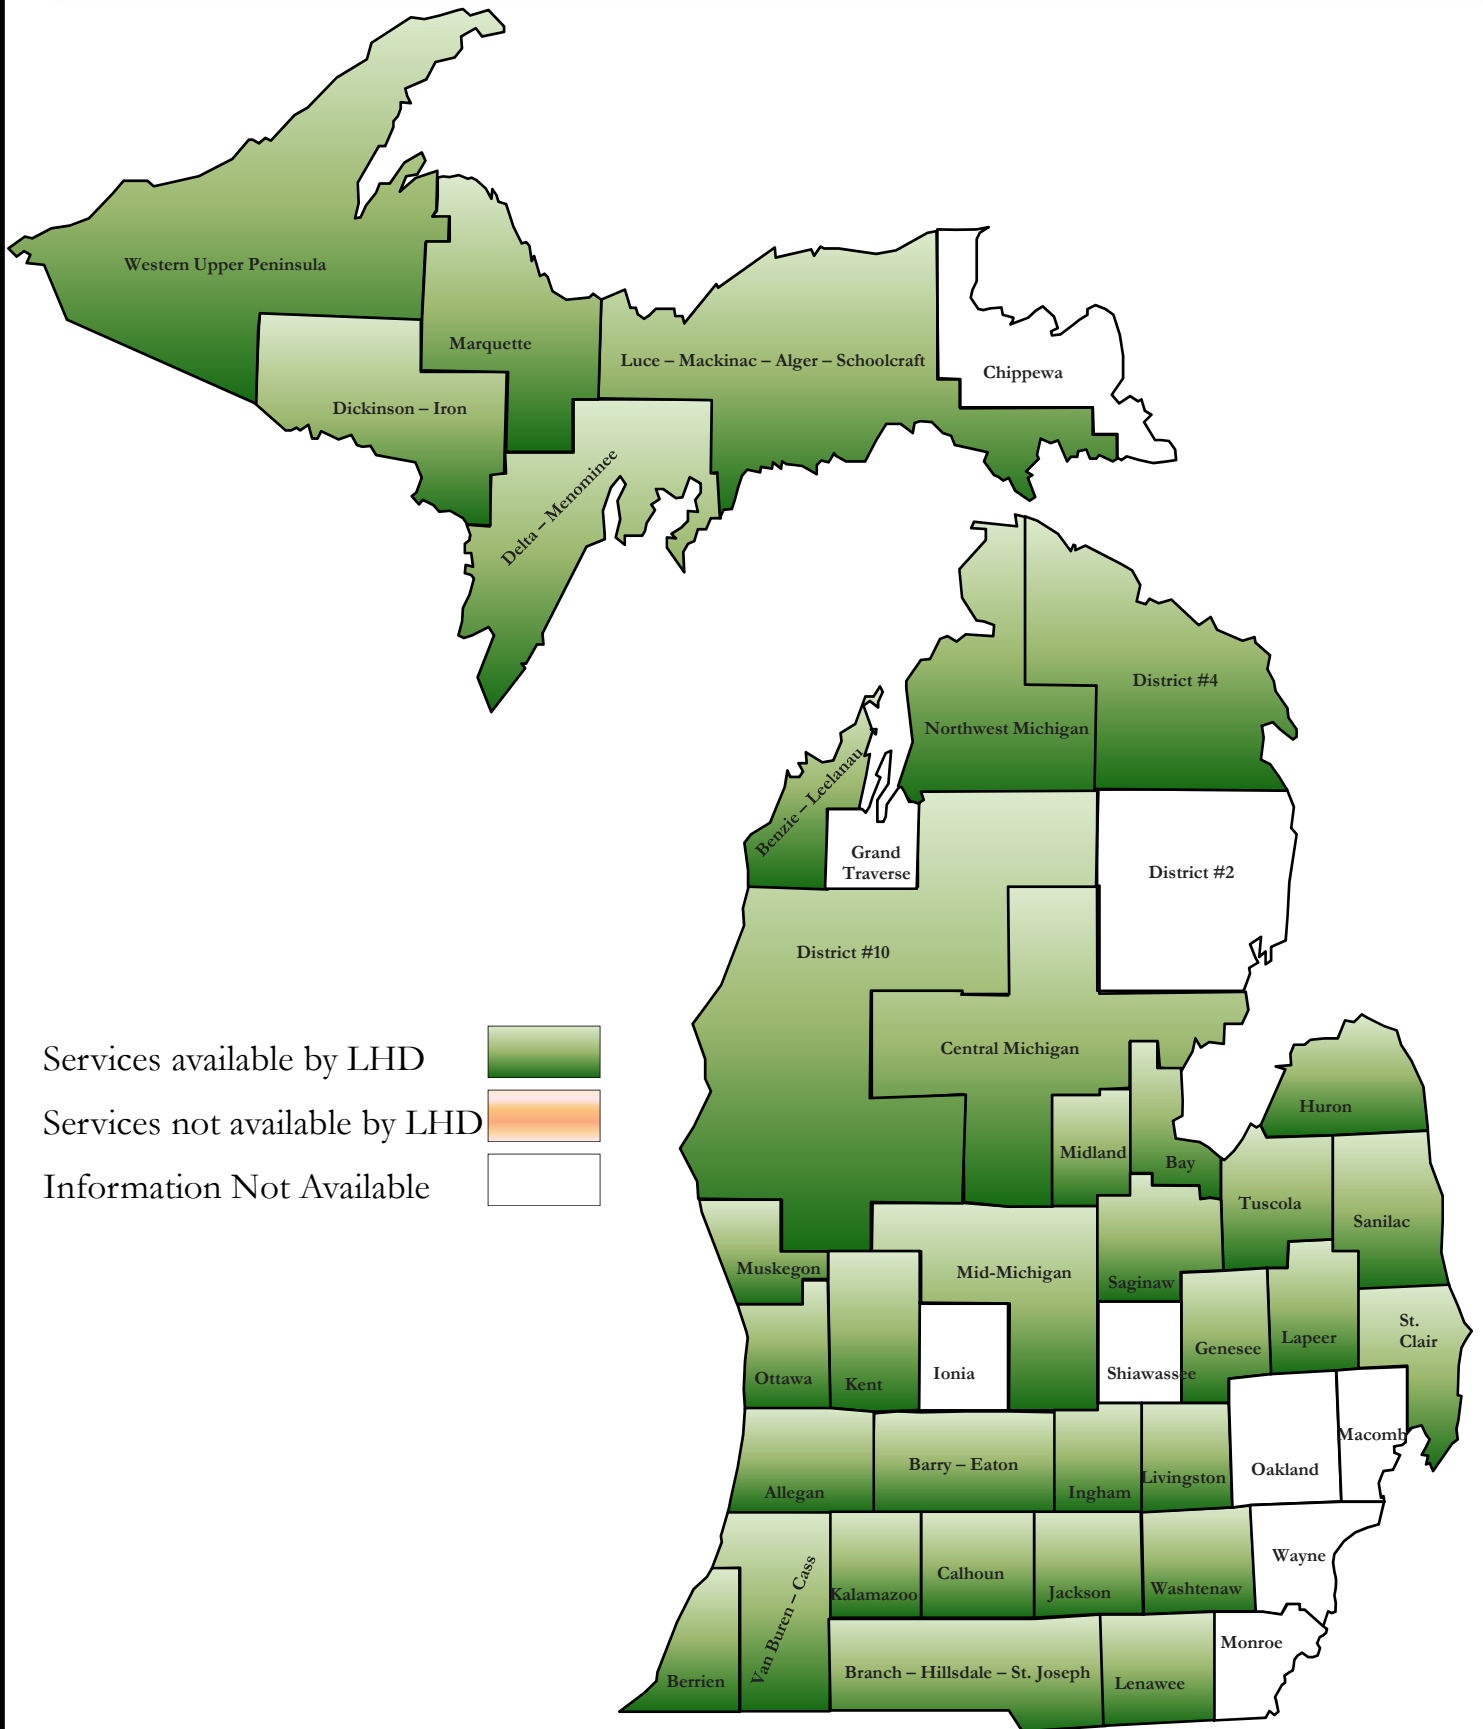

In the context of the survey LHD were asked to indicate whether their department provided a specific service. The survey also gave the option to identify if the service was performed by the LHD and/or contracted out. Contract out is defined as “Pay another organization to perform this activity on behalf of the LHD.” If the LHD neither performed nor contracted out a service (regardless of whether it was provided by some other organization), LHD selected “Performed NEITHER by LHD directly NOR contracted out by LHD.” Appendix A illustrates this specific information regarding who performs the service.

II. Map of Services Provided

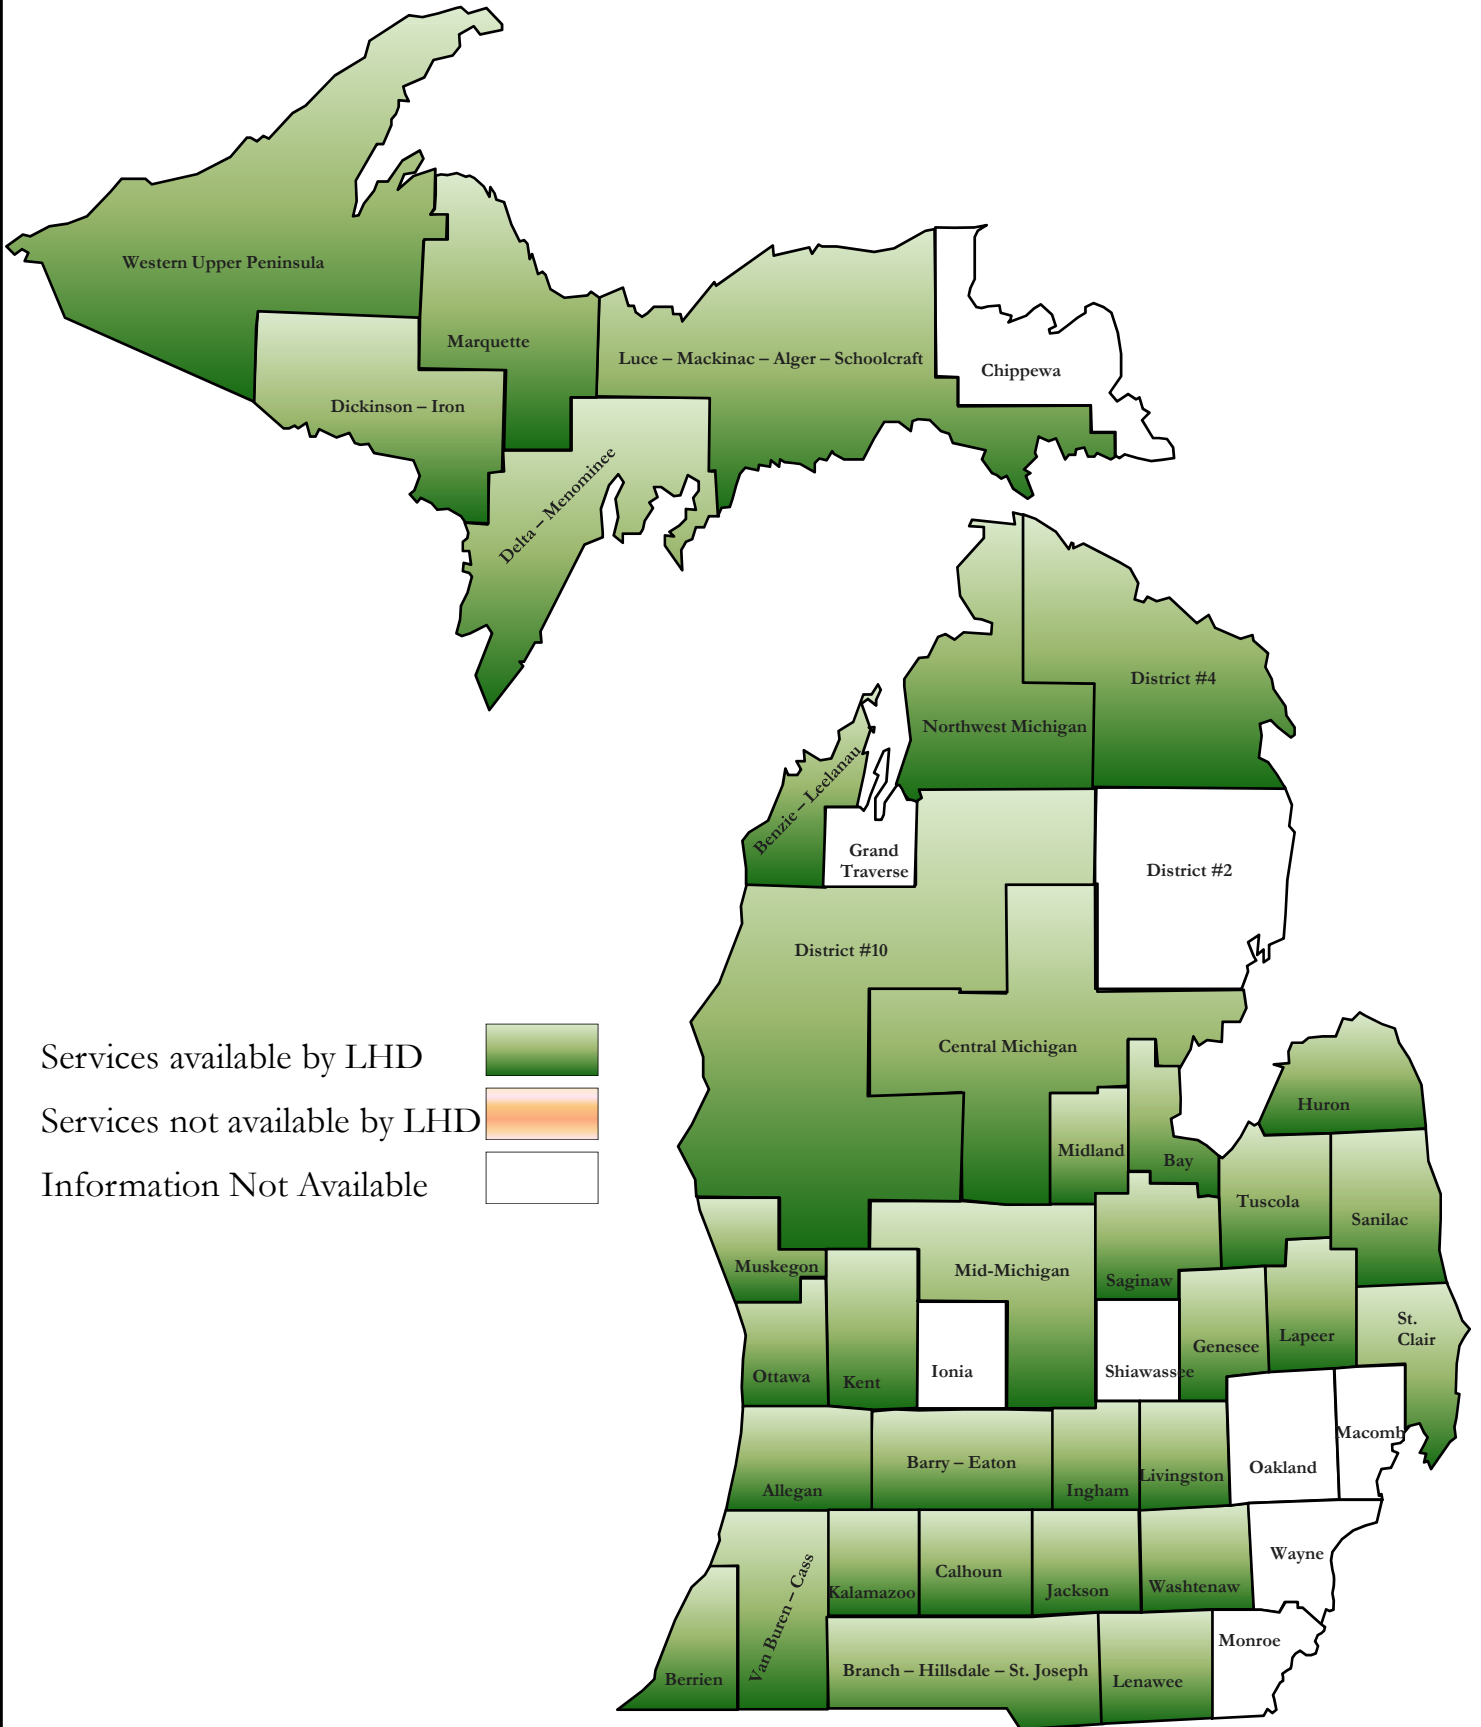

The following maps include information on the services provided by LHD regardless if the service is performed within the LHD or contracted out to another agency.
