Environmental HEALTH

NOW YOU SEE IT—

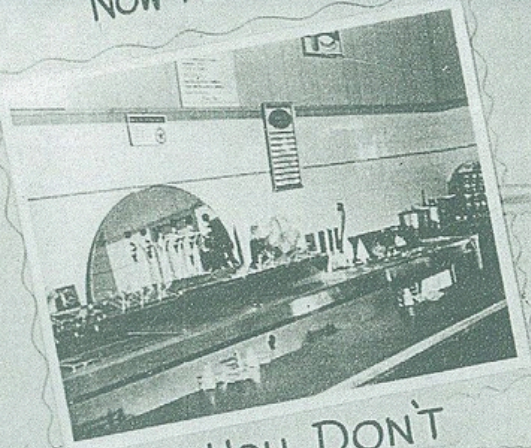

Sanitation is a way of life. It is the quality of living that is expressed in the clean home, the clean farm, the clean business and industry, the clean neighborhood, the clean community. Being a way of life it must come from within the people: it is nourished by knowledge and grows as an obligation and an ideal in human relations.

City Receives Initial Allotment of Preventive, Gamma Globulin

Grand Rapids health department has received an allocation of 700 cubic centimeters of gamma globulin for use in preventing poliomyelitis, Dr. W. B. Prothro, city health officer reported Friday. Source of the supply is the state health department.

The allocation is the first here earmarked for use in polio prevention, although small supplies have been used in the past in combating measles and other diseases, Dr. Prothro said.

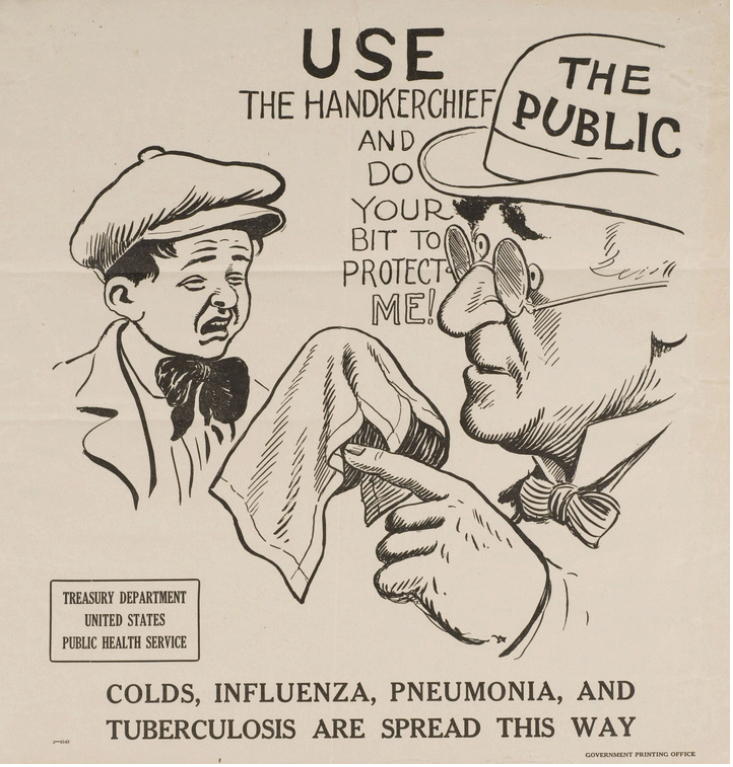

He reported that there have been no requests for the drug from local physicians but that it is available to physicians.

Priorities Listed.

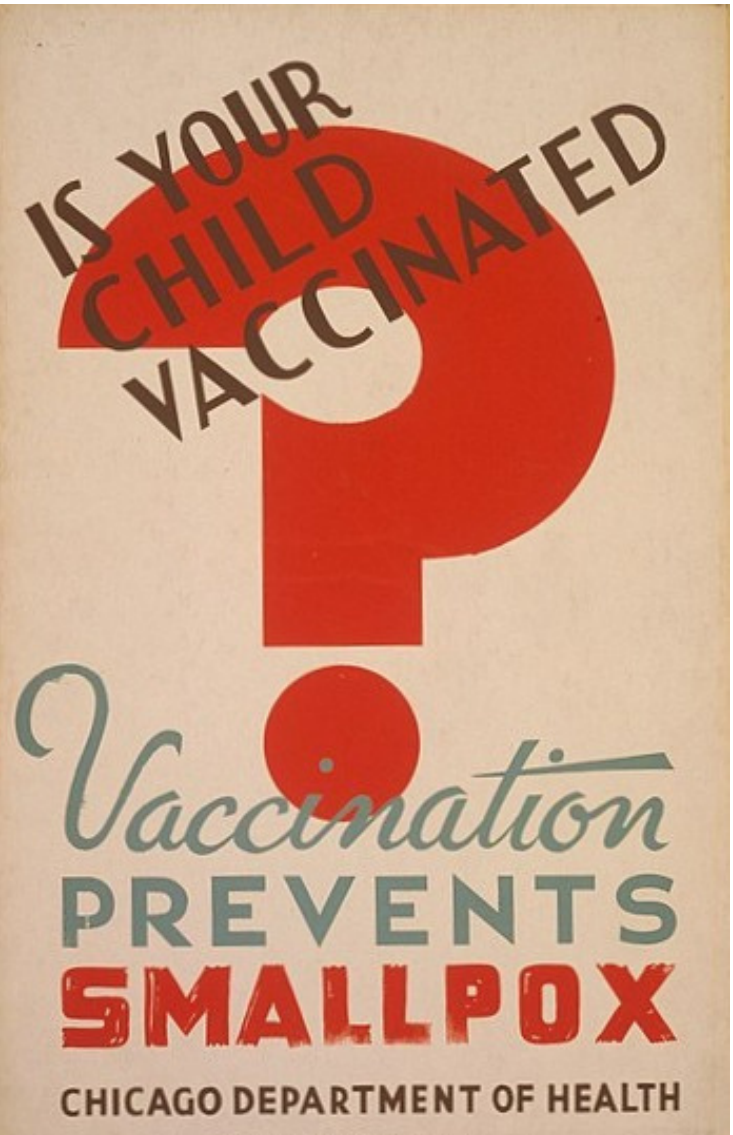

The health officer said the gamma globulin will be distributed on a priority basis. First priority will be persons under 30 living in a home where the disease has been diagnosed.

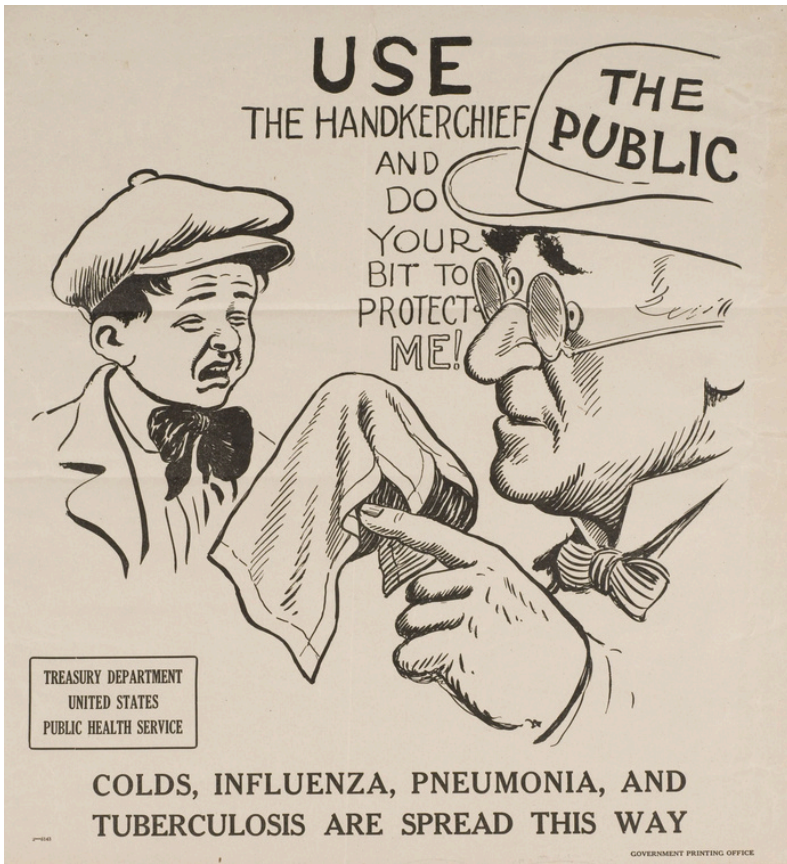

Second priority will be given to intimate polio contacts outside the

KEEP YOUR Distance

Practice Social Distancing

The best way to prevent illness is to avoid being exposed to this virus. The virus is thought to spread mainly from person-to-person who are in close contact with one another. Keep a 6-foot radius, avoid gathering in groups of more than 10 people, discretionary travel, shopping trips, social visits, and bars.
