

My name is Courtney, and I am with the Michigan Mosquito Control Association, and we are once again accepting applications for the \$2,000.00 grant that we offer to any interested agency, private business, university, etc. who could utilize funding to improve controlling and/or understanding mosquitoes. I was given your contact information to potentially share this opportunity with Health Departments across the State of Michigan.

The requirements are very basic and could potentially be utilized by agencies to purchase insecticide, microscopes, or traps to do mosquito surveillance in their community. Last year's grant was awarded to the Van Buren/Cass District Health Department whom we are excited to have present at our 2025 MMCA Conference.

This grant offers limitless opportunities and helps to further mosquito control and awareness throughout the state. The only requirement is that the winner must present at our conference the following year to discuss what they've done with the funding. All who are interested can easily apply on our website and the following link: [Scholarships/Awards - Michigan Mosquito Control Association](#) This link also includes information regarding our Opportunity Grant which allows individuals with an active involvement or interest in mosquito control to attend this educational forum who may not otherwise have the opportunity to participate.
